PROFESSIONAL SUMMARY

Software Engineer with a strong foundation in backend development and API integrations. Experienced in building scalable, high-performance systems that solve complex problems and enhance the user experience. Contributed to impactful solutions for a top-performing iCasino platform, delivering both technical excellence and measurable business value.

TECHNICAL SKILLS

Languages: Python, Elixir, Java, JavaScript, TypeScript, HTML/CSS

Frameworks & Libraries: Phoenix, LiveView, Oban, React

Tools & Technologies: REST APIs, gRPC, Protobuf, GraphQL, Postman, Docker, Kubernetes, Git, Jenkins, Kafka, PostgreSQL, Splunk, Datadog, IBM RFT

EXPERIENCE

Software Engineer, Casino

March 2024 - September 2024

PENN Interactive - theScore

Toronto, ON

- Designed and implemented backend systems to ingest, filter, and aggregate live game round data to power a real-time scoreboard for a team-based contest, supporting weekly marketing campaigns through automated score tracking and live updates using Elixir, Oban, PostgreSQL, and LiveView.
- Implemented a backend integration to ingest jackpot data from a third-party provider, to display accurate jackpot values across games on the platform, which resulted in an improved player experience.
- Refactored backend systems to integrate a new payout API from a third-party game provider, enabling automated tournament payouts while eliminating manual processes and improving reliability.
- Contributed to the integration of a new third-party game provider by implementing required backend functionality and coordinating with their engineering team to complete external validation and enable game launches on the platform.
- Investigated and resolved ingestion issues and game feature bugs as part of a shared backend support rotation, using tools like Splunk, Postman, and Datadog to help maintain platform-wide reliability.

Software Engineer Intern, Payments

January 2023 - April 2023

PENN Interactive - theScore

Toronto, ON

- Enabled region-specific responsible gaming content in transaction notification emails by enhancing backend logic and using gRPC to pass region data across services to ensure compliance with gaming regulations.
- Improved and maintained payment provider integrations by resolving API issues using Elixir, Postman, and Splunk, ensuring seamless transaction processing and system reliability.
- Contributed to the Barstool Sports migration by assisting with the development and testing of features, ensuring smooth integration and alignment with infrastructure standards.

Automation Test Developer Intern

September 2020 – April 2021

The Stars Group - PokerStars

Richmond Hill, ON

- Developed and maintained automated test scripts in Java for PokerStars' desktop and server platforms, improving regression testing reliability and supporting fast-paced release cycles.
- Executed automated regression and performance tests using Jenkins and IBM Rational Functional Tester (RFT), delivering results that directly supported product validation and quality assurance.
- Led monthly performance testing initiatives by conducting client stress tests and providing actionable insights to project teams for strategic decision-making.

EDUCATION

York University - Lassonde School of Engineering

Toronto, ON

Bachelor of Science in Computer Science

Burman University

Lacombe, AB

Bachelor of Science in Biology: Bio-Medical Track, Minor in Chemistry
